Straighten your wire and string on a chip bead.

Holding the bead, at the center of the wire leaving equal length tails, twist the wire for a short length, about 1/2" as shown.
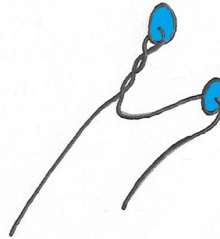

With one of the tails, string on another bead as shown, and twist a short length, again about 1/2". Continue branching as shown in 3-5 using the tails.

4.

5.

After you have about 5 chips strung, you have created a branch, twist the tails to finish the branch. You should have 3 branches total.

Now twist the branches together as shown to form a trunk and roots.

Now bend your branches down in a natural looking way and twist your roots and bend out wires to sit and conform on your base. Glue down.
